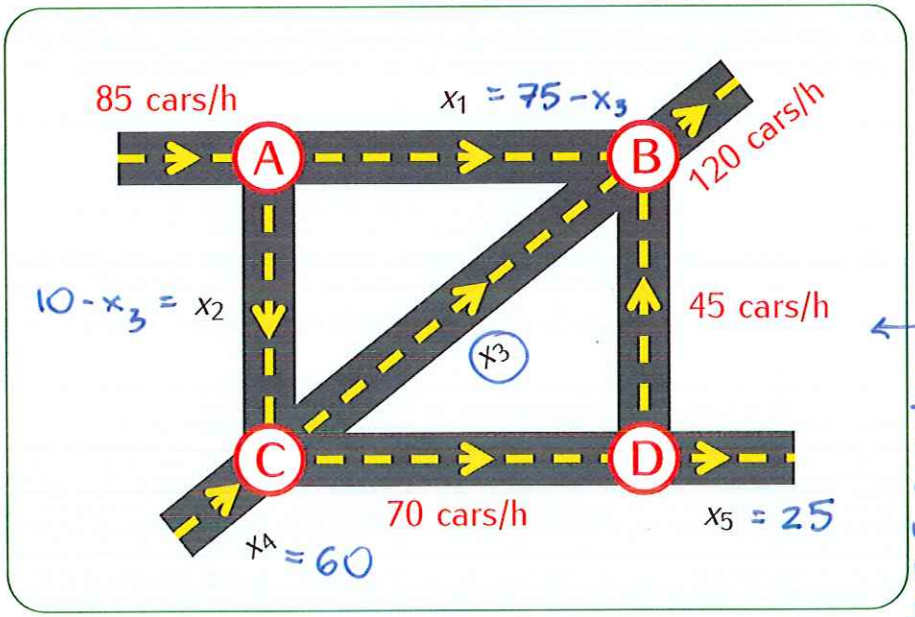
Computations of traffic flow



In order to get full information about the flow of traffic we would need to measure the flow x_3.

Problem. Find the flow rate of cars on each segment of streets.

Note:

- flow into an intersection = flowout of that intersection
- total flow in = total flow out

	IN	=	OUT
total :	$85 + x_4$	=	$120 + x_5$
@A :	85	=	$x_1 + x_2$
@B :	$x_1 + x_3 + 45$	=	120
@C :	$x_2 + x_4$	=	$x_3 + 70$
@D :	70	=	$x_5 + 45$

$$\Rightarrow \begin{cases} x_4 - x_5 = 35 \\ x_1 + x_2 = 85 \\ x_1 + x_3 = 75 \\ x_2 - x_3 + x_4 = 70 \\ x_5 = 25 \end{cases}$$

augmented matrix:

$$\begin{array}{c} \begin{matrix} x_1 & x_2 & x_3 & x_4 & x_5 \end{matrix} \\ \left[\begin{array}{ccccc|c} 0 & 0 & 0 & 1 & -1 & 35 \\ 1 & 1 & 0 & 0 & 0 & 85 \\ 1 & 0 & 1 & 0 & 0 & 75 \\ 0 & 1 & -1 & 1 & 0 & 70 \\ 0 & 0 & 0 & 0 & 1 & 25 \end{array}\right] \end{array} \xrightarrow{\text{row reduction}} \begin{array}{c} \begin{matrix} x_1 & x_2 & x_3 & x_4 & x_5 \end{matrix} \\ \left[\begin{array}{ccccc|c} 1 & 0 & 1 & 0 & 0 & 75 \\ 0 & 1 & -1 & 0 & 0 & 10 \\ 0 & 0 & 0 & 1 & 0 & 60 \\ 0 & 0 & 0 & 0 & 1 & 25 \\ 0 & 0 & 0 & 0 & 0 & 0 \end{array}\right] \end{array} \rightarrow \begin{cases} x_1 = 75 - x_3 \\ x_2 = 10 + x_3 \\ x_3 = \text{free} \\ x_4 = 60 \\ x_5 = 25 \end{cases}$$

Note:

- The numbers x_1, x_2, x_3, x_4 are integers.
- The number of atoms of each element on the left side is the same as the number of atoms of that element on the right side.

C: $3x_1 = x_3$

H: $8x_1 = 2x_4$

O: $2x_2 = 2x_3 + x_4$

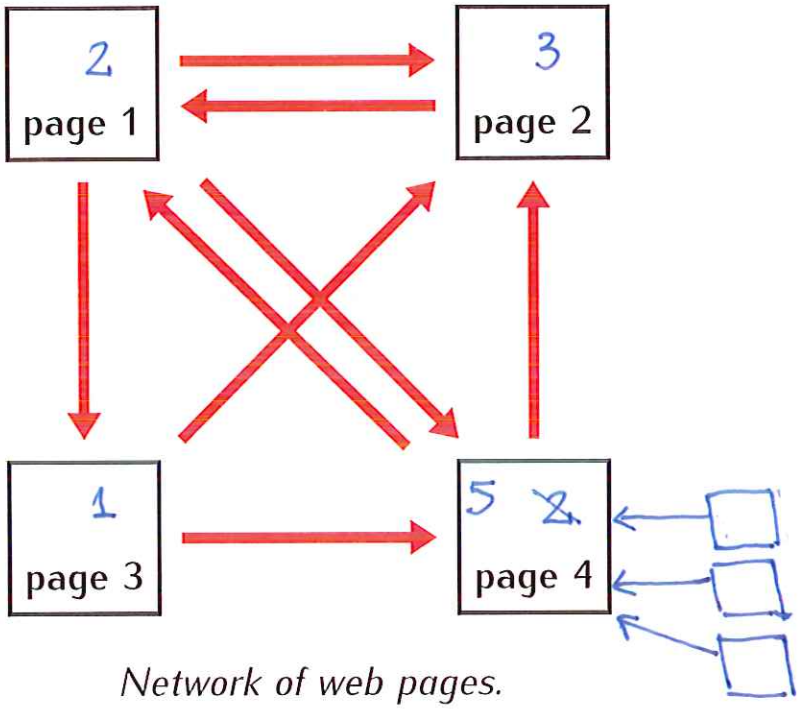
How to rank webpages?

Very simple ranking:

$$\text{ranking of a page} = \begin{pmatrix} \text{number of links} \\ \text{pointing to that page} \end{pmatrix}$$



Network of web pages.

Problem. This is very easy to manipulate.

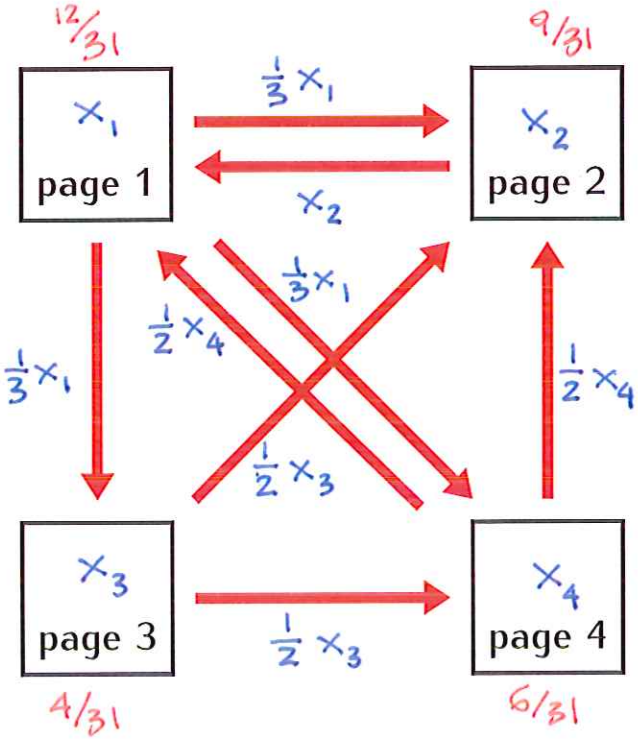
How to rank webpages?

Google PageRank: Links from highly ranked pages are worth more than links from lower ranked pages.

If:

- the rank of a page is x
- the page has n links to other pages

then each link from that page is worth x/n.



$$\begin{cases} x_1 = x_2 + \frac{1}{2}x_4 \\ x_2 = \frac{1}{3}x_1 + \frac{1}{2}x_3 + \frac{1}{2}x_4 \\ x_3 = \frac{1}{3}x_1 \\ x_4 = \frac{1}{3}x_1 + \frac{1}{2}x_3 \end{cases}$$

↓ simplify

$$\begin{cases} x_1 - x_2 - \frac{1}{2}x_4 = 0 \\ -\frac{1}{3}x_1 + x_2 - \frac{1}{2}x_3 - \frac{1}{2}x_4 = 0 \\ -\frac{1}{3}x_1 + x_3 = 0 \\ -\frac{1}{3}x_1 - \frac{1}{2}x_3 + x_4 = 0 \\ x_1 + x_2 + x_3 + x_4 = 1 \end{cases}$$

← This system has a trivial solution $x_1 = 0,\ x_2 = 0,\ x_3 = 0,\ x_4 = 0$

← Adding this equation eliminates the trivial solution
