#### Theorem

Any A an  $m \times n$  matrix can be written as a product

$$A = U\Sigma V^T$$

where:

- $U = [\mathbf{u}_1 \dots \mathbf{u}_m]$  is an  $m \times m$  orthogonal matrix.
- $V = [v_1 \dots v_n]$  is an  $n \times n$  orthogonal matrix.
- $\Sigma$  is an  $m \times n$  matrix of the following form:

$$\begin{bmatrix} \sigma_{1} & 0 & \cdots & 0 \\ 0 & \sigma_{2} & \cdots & 0 \\ \vdots & \vdots & \ddots & 0 \\ 0 & 0 & \cdots & \sigma_{n} \\ 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & 0 & 0 & \cdots & 0 \\ 0 & 0 & \cdots & \sigma_{m} & 0 & \cdots & 0 \end{bmatrix}$$

$$(\text{if } n \leq m)$$

$$(\text{if } n \geq m)$$

where  $\sigma_1 \geq \sigma_2 \geq \ldots \geq 0$ .

#### Note.

- The numbers  $\sigma_1, \sigma_2, \ldots$  are called *singular values* of A.
- The vectors  $\mathbf{u}_1, \ldots, \mathbf{u}_m$  are called *left singular vectors* of A.
- Then the vectors  $v_1, \ldots, v_n$  are called *right singular vectors* of A.
- The formula  $A = U\Sigma V^T$  is called a singular value decomposition (SVD) of A.
- ullet The matrix  $oldsymbol{\Sigma}$  is uniquely determined, but U and V depend on some choices.

### **Theorem**

Let A be a matrix with a singular value decomposition

$$A = U\Sigma V^{T}$$

lf

$$U = [\mathbf{u}_1 \ldots \mathbf{u}_m] \qquad V = [\mathbf{v}_1 \ldots \mathbf{v}_n]$$

and  $\sigma_1, \ldots, \sigma_r$  are singular values of A then then

$$A = \sigma_1(\mathbf{u}_1\mathbf{v}_1^T) + \sigma_2(\mathbf{u}_2\mathbf{v}_2^T) + \ldots + \sigma_r(\mathbf{u}_r\mathbf{v}_r^T)$$

## Application: Image compression

- $\bullet$  The size of this image is  $800 \times 700$  pixels.
- The color of each pixel is represented by an integer between 0 (black) and 255 (white).
- The whole image is described by a matrix A consisting of  $800 \times 700 = 560,000$  numbers.
- Each number is stored in 1 byte, so the image file size is 560,000 bytes ( $\approx 0.53$  MB).

### How to make the image file smaller:

**1)** Compute SVD of the matrix *A*:

$$A = U\Sigma V^T$$

where

$$U = [\mathbf{u}_1 \dots \mathbf{u}_m] \qquad V = [\mathbf{v}_1 \dots \mathbf{v}_n]$$

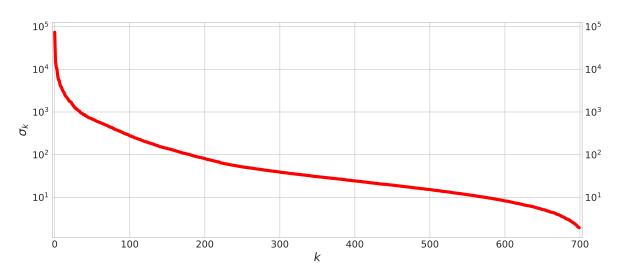

and  $\sigma_1, \ldots, \sigma_r$  are singular values of A.

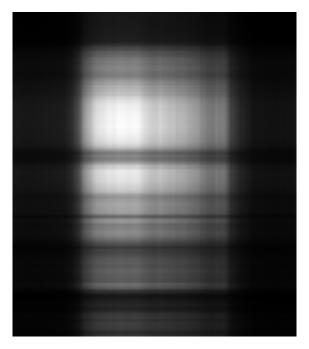

2) Replace A by the matrix

$$B_k = \sigma_1(\mathbf{u}_1\mathbf{v}_1^T) + \ldots + \sigma_k(\mathbf{u}_k\mathbf{v}_k^T)$$

for some  $1 \le k \le 700$ . This matrix can be stored using  $k \cdot (800 + 700 + 1)$  numbers.

# Singular values of the matrix $\boldsymbol{A}$

matrix B<sub>1</sub> 1501 bytes compression 374:1

matrix B<sub>5</sub> 7905 bytes compression 75:1

matrix  $B_{10}$ 15,010 bytes compression 37:1

 $\begin{array}{l} \textbf{matrix} \ B_{20} \\ 30,020 \ bytes \\ \textbf{compression} \ 18:1 \end{array}$ 

matrix B<sub>50</sub> 75,050 bytes compression 7:1

matrix B<sub>100</sub> 150,100 bytes compression 4:1

# $\underline{ \text{How to compute SVD of a matrix } A }$

## How to compute SVD of a matrix A

1) Compute an orthogonal diagonalization of the symmetric  $n \times n$  matrix  $A^TA$ :

$$A^T A = Q D Q^T$$

such that eigenvalues on the diagonal of the matrix D are arranged from the largest to the smallest. We set  $V=\mathbb{Q}$ .

2) If

$$D = \left[ \begin{array}{cccc} \lambda_1 & 0 & \dots & 0 \\ 0 & \lambda_2 & \dots & 0 \\ \vdots & \vdots & \ddots & 0 \\ 0 & 0 & \dots & \lambda_n \end{array} \right]$$

then  $\sigma_i = \sqrt{\lambda_i}$ . This gives the matrix  $\Sigma$ .

Note: if n > m then we use only  $\lambda_1, \ldots, \lambda_m$ . The remaining eigenvalues  $\lambda_{m+1}, \ldots, \lambda_n$  of D will be equal to 0 in this case.

3) Let  $V = [v_1 \ldots v_n]$ , and let  $\sigma_1, \ldots, \sigma_r$  be non-zero singular values of A. The first r columns of the matrix  $U = [\mathbf{u}_1 \ldots \mathbf{u}_m]$  are given by

$$\mathbf{u}_i = \frac{1}{\sigma_i} A \mathbf{v}_i$$

The remaining columns  $\mathbf{u}_{r+1}, \ldots, \mathbf{u}_m$  can be added arbitrarily so that U is an orthogonal matrix (i.e. $\{\mathbf{u}_1, \ldots, \mathbf{u}_m\}$ ) is an orthonormal basis of  $\mathbb{R}^m$ .

**Example.** Find SVD of the following matrix:

$$A = \begin{bmatrix} -1 & 0 \\ 1 & -1 \\ 0 & 1 \end{bmatrix}$$
