#### Other operations on matrices

1) Addition.

If 
$$A = \begin{bmatrix} a_{11} & \dots & a_{1n} \\ \vdots & & \vdots \\ a_{m1} & \dots & a_{mn} \end{bmatrix}$$
,  $B = \begin{bmatrix} b_{11} & \dots & b_{1n} \\ \vdots & & \vdots \\ b_{m1} & \dots & b_{mn} \end{bmatrix}$  are  $m \times n$  matrices then

$$A + B = \begin{bmatrix} a_{11} + b_{11} & \dots & a_{1n} + b_{1n} \\ \vdots & & \vdots \\ a_{m1} + b_{m1} & \dots & a_{mn} + b_{mn} \end{bmatrix}$$

**Note.** The sum A + B is defined only if A and B have the same dimensions.

#### 2) Scalar multiplication.

If 
$$A = \begin{bmatrix} a_{11} & \dots & a_{1n} \\ \vdots & & \vdots \\ a_{m1} & \dots & a_{mn} \end{bmatrix}$$
, and  $c$  is a scalar then

$$cA = \begin{bmatrix} ca_{11} & \dots & ca_{1n} \\ \vdots & & \vdots \\ ca_{m1} & \dots & ca_{mn} \end{bmatrix}$$

### Properties of matrix algebra

**1)** 
$$(AB)C = A(BC)$$

2) 
$$(A + B)C = AC + BC$$
  
 $A(B + C) = AB + AC$ 

3)  $I_n = \text{the } n \times n \text{ identity matrix:}$ 

$$I_n = \begin{bmatrix} 1 & 0 & \dots & 0 \\ 0 & 1 & \dots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \dots & 1 \end{bmatrix}$$

If A is an  $m \times n$  matrix then

$$A \cdot I_n = A$$

$$I_m \cdot A = A$$

## Non-commutativity of matrix multiplication

1) If AB is defined then BA need not be defined.

2) Even if both AB and BA are both defined then usually

$$AB \neq BA$$

## One more operation on matrices: matrix transpose

#### **Definition**

The transpose of a matrix A is the matrix  $A^T$  such that

(rows of 
$$A^T$$
) = (columns of  $A$ )

# Properties of transpose

1) 
$$(A^T)^T = A$$

2) 
$$(A + B)^T = (A^T + B^T)$$

3) 
$$(AB)^T = B^T A^T$$
